

## ***Solution***    **Section 1.2 – Propositional Equivalences**

### ***Exercise***

Use the truth table to verify these equivalences

$$a) \quad p \wedge \mathbf{T} \equiv p$$

$$b) \quad p \vee \mathbf{F} \equiv p$$

$$c) \quad p \wedge \mathbf{F} \equiv \mathbf{F}$$

$$d) \quad p \vee \mathbf{T} \equiv \mathbf{T}$$

$$e) \quad p \vee p \equiv p$$

$$f) \quad p \wedge p \equiv p$$

### **Solution**

$\underline{p}$	$\underline{p \wedge \mathbf{T}}$	$\underline{p \vee \mathbf{F}}$	$\underline{p \wedge \mathbf{F}}$	$\underline{p \vee \mathbf{T}}$	$\underline{p \vee p}$	$\underline{p \wedge p}$
$T$	$T$	$T$	$F$	$T$	$T$	$T$
$F$	$F$	$F$	$F$	$T$	$F$	$F$
	<i>hold</i>	<i>hold</i>	<i>hold</i>	<i>hold</i>	<i>hold</i>	<i>hold</i>

### ***Exercise***

Show that  $\neg(\neg p)$  and  $p$  are logically equivalent

### **Solution**

$\underline{p}$	$\underline{\neg p}$	$\underline{\neg(\neg p)}$
$T$	$F$	$T$
$F$	$T$	$F$

Therefore,  $\neg(\neg p)$  and  $p$  are logically equivalent

### ***Exercise***

Use the truth table to verify the commutative laws

$$a) \quad p \vee q \equiv q \vee p$$

$$b) \quad p \wedge q \equiv q \wedge p$$

### **Solution**

$\underline{p}$	$\underline{q}$	$\underline{p \vee q}$	$\underline{q \vee p}$
$T$	$T$	$T$	$T$
$T$	$F$	$T$	$T$
$F$	$T$	$T$	$T$
$F$	$F$	$F$	$F$

*Identical*

$\underline{p}$	$\underline{q}$	$\underline{p \wedge q}$	$\underline{q \wedge p}$
$T$	$T$	$T$	$T$
$T$	$F$	$F$	$F$
$F$	$T$	$F$	$F$
$F$	$F$	$F$	$F$

*Identical*

## Exercise

Use the truth table to verify the associative laws

a)  $(p \vee q) \vee r \equiv p \vee (q \vee r)$

b)  $(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$

## Solution

a)

$p$	$q$	$r$	$p \vee q$	$(p \vee q) \vee r$	$q \vee r$	$p \vee (q \vee r)$
T	T	T	<b>T</b>	<i>T</i>	<b>T</b>	<i>T</i>
T	T	F	<b>T</b>	<i>T</i>	<b>T</b>	<i>T</i>
T	F	T	<b>T</b>	<i>T</i>	<b>T</b>	<i>T</i>
T	F	F	<b>T</b>	<i>T</i>	<b>F</b>	<i>T</i>
F	T	T	<b>T</b>	<i>T</i>	<b>T</b>	<i>T</i>
F	T	F	<b>T</b>	<i>T</i>	<b>T</b>	<i>T</i>
F	F	T	<b>F</b>	<i>T</i>	<b>T</b>	<i>T</i>
F	F	F	<b>F</b>	<i>F</i>	<b>F</b>	<i>F</i>

$(p \vee q) \vee r \equiv p \vee (q \vee r)$  is true

b)

$p$	$q$	$r$	$p \wedge q$	$(p \wedge q) \wedge r$	$q \wedge r$	$p \wedge (q \wedge r)$
T	T	T	<b>T</b>	<i>T</i>	<b>T</b>	<i>T</i>
T	T	F	<b>T</b>	<i>F</i>	<b>F</b>	<i>F</i>
T	F	T	<b>F</b>	<i>F</i>	<b>F</b>	<i>F</i>
T	F	F	<b>F</b>	<i>F</i>	<b>F</b>	<i>F</i>
F	T	T	<b>F</b>	<i>F</i>	<b>T</b>	<i>F</i>
F	T	F	<b>F</b>	<i>F</i>	<b>F</b>	<i>F</i>
F	F	T	<b>F</b>	<i>F</i>	<b>F</b>	<i>F</i>
F	F	F	<b>F</b>	<i>F</i>	<b>F</b>	<i>F</i>

$(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$  is true

## Exercise

Show that each of these conditional statements is a tautology by using truth result tables.

a)  $(p \wedge q) \rightarrow p$

b)  $p \rightarrow (p \vee q)$

c)  $\neg p \rightarrow (p \rightarrow q)$

d)  $(p \wedge q) \rightarrow (p \rightarrow q)$

e)  $\neg(p \rightarrow q) \rightarrow p$

f)  $\neg p \wedge (p \vee q) \rightarrow q$

g)  $\left[(p \rightarrow q) \wedge (q \rightarrow r)\right] \rightarrow (p \rightarrow r)$

h)  $\left[p \wedge (p \rightarrow q)\right] \rightarrow q$

**Solution**

a)

$p$	$q$	$p \vee q$	$p \rightarrow (p \vee q)$
T	T	<b>T</b>	<b>T</b>
T	F	<b>T</b>	<b>T</b>
F	T	<b>T</b>	<b>T</b>
F	F	<b>F</b>	<b>T</b>

b)

$p$	$q$	$p \wedge q$	$(p \wedge q) \rightarrow p$
T	T	<b>T</b>	<b>T</b>
T	F	<b>F</b>	<b>T</b>
F	T	<b>F</b>	<b>T</b>
F	F	<b>F</b>	<b>T</b>

c)

T	T	<b>T</b>	<b>T</b>	<b>T</b>
T	F	<b>F</b>	<b>F</b>	<b>T</b>
F	T	<b>T</b>	<b>F</b>	<b>T</b>
F	F	<b>T</b>	<b>F</b>	<b>T</b>

### Exercise

Show that  $p \leftrightarrow q$  and  $(p \wedge q) \vee (\neg p \wedge \neg q)$  are logically equivalent

### Solution

The proposition  $p \leftrightarrow q$  is true when  $p$  and  $q$  have the same true or false value. Since  $p$  and  $q$  are truth, then  $p \wedge q$  only true. When  $p$  and  $q$  are false, then the negation  $\neg p$  and  $\neg q$  are true, then  $\neg p \wedge \neg q$  is true. Therefore  $(p \wedge q) \vee (\neg p \wedge \neg q)$  is true only when both are true. Therefore these two expressions are logically equivalent.

$p$	$q$	$p \wedge q$	$\neg p$	$\neg q$	$\neg p \wedge \neg q$	$(p \wedge q) \vee (\neg p \wedge \neg q)$	$p \leftrightarrow q$
T	T	<b>T</b>	F	F	<b>F</b>	<b>T</b>	<b>T</b>
T	F	<b>F</b>	F	T	<b>F</b>	<b>F</b>	<b>F</b>
F	T	<b>F</b>	T	F	<b>F</b>	<b>F</b>	<b>F</b>
F	F	<b>F</b>	T	T	<b>T</b>	<b>T</b>	<b>T</b>

### Exercise

Show that  $\neg(p \leftrightarrow q)$  and  $p \leftrightarrow \neg q$  are logically equivalent

#### Solution

The proposition  $\neg(p \leftrightarrow q)$  is true when  $p \leftrightarrow q$  is false. Since  $p \leftrightarrow q$  is true when  $p$  and  $q$  have the same truth value, it is false when  $p$  and  $q$  have different truth values (either  $p$  is true and  $q$  is false, or vice versa). These are precisely the cases in which  $p \leftrightarrow \neg q$  is true. Therefore these two expressions are logically equivalent.

$p$	$q$	$p \leftrightarrow q$	$\neg(p \leftrightarrow q)$	$\neg q$	$p \leftrightarrow \neg q$
T	T	<b><i>F</i></b>	<b><i>T</i></b>	F	<b><i>T</i></b>
T	F	<b><i>T</i></b>	<b><i>F</i></b>	T	<b><i>F</i></b>
F	T	<b><i>T</i></b>	<b><i>F</i></b>	F	<b><i>T</i></b>
F	F	<b><i>F</i></b>	<b><i>T</i></b>	T	<b><i>F</i></b>

### Exercise

Show that  $p \rightarrow q$  and  $\neg q \rightarrow \neg p$  are logically equivalent

#### Solution

It is easy to see from the definitions of conditional statement and negation of these propositions is false in the case which  $p$  is true and  $q$  is false the proposition is false, and true in the other three cases. Therefore these two expressions are logically equivalent.

$p$	$q$	$p \rightarrow q$	$\neg q$	$\neg p$	$\neg q \rightarrow \neg p$
T	T	<b><i>T</i></b>	F	F	<b><i>T</i></b>
T	F	<b><i>F</i></b>	T	F	<b><i>T</i></b>
F	T	<b><i>T</i></b>	F	T	<b><i>T</i></b>
F	F	<b><i>T</i></b>	T	T	<b><i>T</i></b>

### Exercise

Show that  $\neg p \leftrightarrow q$  and  $p \leftrightarrow \neg q$  are logically equivalent

#### Solution

The proposition  $\neg p \leftrightarrow q$  is true when  $\neg p$  and  $q$  have the same truth values, which means that  $p$  and  $q$  have different truth values (either  $p$  is true and  $q$  is false, or vice versa). By the same reasoning, these are exactly the cases in which  $p \leftrightarrow \neg q$  is true. Therefore these two expressions are logically equivalent.

### ***Exercise***

Show that  $(p \rightarrow q) \vee (p \rightarrow r)$  and  $p \rightarrow (q \vee r)$  are logically equivalent

#### **Solution**

$(p \rightarrow q) \vee (p \rightarrow r)$  will be true when either of the conditional statements is true. The conditional statement will be true if  $p$  is false, or if  $q$  in one case or  $r$  in the other case is true, when  $q \vee r$  is true, which is precisely  $p \rightarrow (q \vee r)$  is true. Since the two propositions are true in exactly the same situation, they are logically equivalent.

### ***Exercise***

Show that  $(p \rightarrow r) \vee (q \rightarrow r)$  and  $(p \wedge q) \rightarrow r$  are logically equivalent

#### **Solution**

In order for  $(p \rightarrow r) \vee (q \rightarrow r)$  to be false, we must have both of the two implications false, which happens exactly when  $r$  is false and both  $p$  and  $q$  are true. But this precisely the case in which  $p \wedge q$  is true and  $r$  is false, which is  $(p \wedge q) \rightarrow r$  is false. Therefore these two expressions are logically equivalent.

### ***Exercise***

Show that  $(p \rightarrow q) \wedge (q \rightarrow r) \rightarrow (p \rightarrow r)$  is a tautology

#### **Solution**

Given that  $p$  and  $p \rightarrow q$  are both true, we conclude that  $q$  is true; from that and  $q \rightarrow r$  we conclude that  $r$  is true.

### ***Exercise***

Show that  $(p \vee q) \vee (\neg p \vee r) \rightarrow (q \vee r)$  is a tautology

#### **Solution**

The conclusion  $q \vee r$  will be true in every case except when  $q$  and  $r$  are both false. But if  $q$  and  $r$  are both false, then one of  $p \vee q$  or  $\neg p \vee r$  is false, because one of  $p$  or  $\neg p$  is false. Thus in this case  $(p \vee q) \wedge (\neg p \vee r)$  is false. An conditional statement in which the conclusion is true or the hypothesis is false.

## Exercise

Show that  $|$  (NAND) is functionally complete

### Solution

Equivalence of NOT:

$$p|p \equiv \neg p$$

$$\neg(p \wedge p) \equiv \neg p \quad \text{Equivalence of NAND}$$

$$\neg(p) \equiv \neg p \quad \text{Idempotent law}$$

Equivalence of AND:

$$p \wedge q \equiv \neg(p|q) \quad \text{Definition of NAND}$$

$$p|p$$

$$(p|q)|(p|p)q \quad \text{Negation of } (p|q)$$

Equivalence of OR:

$$p \vee q \equiv \neg(\neg p \wedge \neg q) \quad \text{DeMorgan's equivalence of OR}$$

We can do AND and OR with NANDs, also do ORs with NANDs

Thus, NAND is functionally complete.
