## Section 2.1 – Definition of the Derivative

### Derivative

The derivative of the function  $f$  at  $x$  is defined as

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

A function is differentiable @  $x$  if its derivative exists at  $x$ .

The process of finding derivatives is called ***differentiation***.

$$f'(x), \quad f', \quad \frac{d}{dx}[f(x)], \quad \frac{d}{dx}f, \quad \frac{dy}{dx}, \quad y', \quad \dot{y}, \text{ and } D_x[y]$$

### Differentiability $\Rightarrow$ Continuity

If a function  $f$  is differentiable @  $x = c \Rightarrow f$  is continuous @  $x = c$

### Example

Find the derivative of  $f(x) = x^2$

Solution

$$\begin{aligned} f(x+h) &= (x+h)^2 \\ &= x^2 + 2hx + h^2 \\ f'(x) &= \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h} \\ &= \lim_{h \rightarrow 0} \frac{x^2 + 2hx + h^2 - x^2}{h} \\ &= \lim_{h \rightarrow 0} \frac{2hx + h^2}{h} \\ &= \lim_{h \rightarrow 0} (2x + h) \\ &= 2x \end{aligned}$$

**Example**

Find the derivative of  $f(x) = 3x^2 - 2x$

Solution

$$\begin{aligned}f'(x) &= \lim_{\Delta x \rightarrow 0} \frac{f(x + \Delta x) - f(x)}{\Delta x} \\&= \lim_{\Delta x \rightarrow 0} \frac{3(x + \Delta x)^2 - 2(x + \Delta x) - (3x^2 - 2x)}{\Delta x} \\&= \lim_{\Delta x \rightarrow 0} \frac{3(x^2 + \Delta x^2 + 2x\Delta x) - 2x - 2\Delta x - 3x^2 + 2x}{\Delta x} \\&= \lim_{\Delta x \rightarrow 0} \frac{3x^2 + 3\Delta x^2 + 6x\Delta x - 2x - 2\Delta x - 3x^2 + 2x}{\Delta x} \\&= \lim_{\Delta x \rightarrow 0} \frac{3\Delta x^2 + 6x\Delta x - 2\Delta x}{\Delta x} \\&= \lim_{\Delta x \rightarrow 0} 3\Delta x + 6x - 2 \\&= 6x - 2\end{aligned}$$

## ***Exercises***      ***Section 2.1 – Definition of the Derivative***

1. Find the derivative of  $y$  with the respect to  $t$  for the function  $y = \frac{4}{t}$
2. Find the equation of the tangent line to  $f(x) = x^2 + 1$  that is parallel to  $2x + y = 0$
3. Use the definition of limits to find the derivative:  $f(x) = \frac{3}{\sqrt{x}}$
4. Use the definition of limits to find the derivative:  $f(x) = \sqrt{x+2}$
