

Section 1.4 – Quadratic Graphics

Quadratic Function

A function f is a **quadratic function** if $f(x) = ax^2 + bx + c$

Formula

Vertex of a Parabola

The **vertex** of the graph of $f(x)$ is

$$V_x \text{ or } x_v = -\frac{b}{2a}$$

$$V_y \text{ or } y_v = f\left(-\frac{b}{2a}\right)$$

$$\text{Vertex Point } \left(-\frac{b}{2a}, f\left(-\frac{b}{2a}\right)\right)$$

Axis of Symmetry:

$$x = V_x = -\frac{b}{2a}$$

Minimum or Maximum Point

If $a > 0 \Rightarrow f(x)$ has a **minimum** point

If $a < 0 \Rightarrow f(x)$ has a **maximum** point

@ vertex point (V_x, V_y)

Range

$$\text{If } a > 0 \Rightarrow [V_y, \infty)$$

$$\text{If } a < 0 \Rightarrow (-\infty, V_y]$$

Domain: $(-\infty, \infty)$

Example

$$f(x) = x^2 - 4x - 2$$

$$x = -\frac{b}{2a} = -\frac{-4}{2(1)} = 2$$

$$\begin{aligned} y &= f\left(-\frac{b}{2a}\right) = f(2) \\ &= (2)^2 - 4(2) - 2 \\ &= -6 \end{aligned}$$

Vertex point: $(2, -6)$

Axis of Symmetry: $x = 2$

Minimum point @ $(2, -6)$

$$[-6, \infty)$$

Example

For the graph of the function $f(x) = -x^2 - 2x + 8$

- a. Find the vertex point

$$x = -\frac{-2}{2(-1)} = -1$$

$$y = f(-1) = -(-1)^2 - 2(-1) + 8 = 9$$

Vertex point $(-1, 9)$

- b. Find the line of symmetry: $x = -1$

- c. State whether there is a maximum or minimum value *and* find that value

Minimum point, value $(-1, 9)$

- d. Find the x-intercept

$$x = -4, 2$$

- e. Find the y-intercept

$$y = 8$$

- f. Find the range and the domain of the function.

Range: $(-\infty, 9]$ Domain: $(-\infty, \infty)$

- g. Graph the function and label, show part a thru d on the plot below

- h. On what intervals is the function increasing? Decreasing?

Increasing: $(-\infty, -1)$

Decreasing: $(-1, \infty)$

Example

Find the axis and vertex of the parabola having equation $f(x) = 2x^2 + 4x + 5$

Solution

$$\begin{aligned}x &= -\frac{b}{2a} \\&= -\frac{4}{2(2)} \\&= -1\end{aligned}$$

Axis of the parabola: $x = -1$

$$\begin{aligned}y &= f(-1) \\&= 2(-1)^2 + 4(-1) + 5 \\&= 3\end{aligned}$$

Vertex point: $(-1, 3)$

Definition of a Parabola

A **parabola** is the set of all points in a plane equidistant from a fixed-point F (the **focus**) and a fixed line l (the **directrix**) that lie in the plane

$$y = \frac{1}{4p}x^2 \quad \text{or} \quad x^2 = 4py \quad \rightarrow \begin{cases} \text{Focus: } F(0, p) \\ \text{Directrix: } y = -p \end{cases}$$

$$x = \frac{1}{4p}y^2 \quad \text{or} \quad y^2 = 4px \quad \rightarrow \begin{cases} \text{Focus: } F(p, 0) \\ \text{Directrix: } x = -p \end{cases}$$

The standard equation $y = ax^2$ or $x = ay^2$ is a parabola with vertex $V = (0, 0)$.

Moreover, $a = \frac{1}{4p}$ or $p = \frac{1}{4a}$

Equation, focus, Directrix	Graph for $p > 0$	Graph for $p < 0$
$x^2 = 4py \text{ or } y = \frac{1}{4p}x^2$ Focus: $F(0, p)$ Directrix: $y = -p$		
$y^2 = 4px \text{ or } x = \frac{1}{4p}y^2$ Focus: $F(p, 0)$ Directrix: $x = -p$		
$(y - k)^2 = 4p(x - h)$ $x = ay^2 + by + c$ Focus: $F(h, k + p)$ Directrix: $x = h - p$		
$(x - h)^2 = 4p(y - k)$ $y = ax^2 + bx + c$ Focus: $F(h + p, k)$ Directrix: $y = k - p$		

Example

Find the focus and directrix of the parabola $y = -\frac{1}{6}x^2$.

Solution

Given: $a = -\frac{1}{6}$

$$\begin{aligned} p &= \frac{1}{4a} \\ &= \frac{1}{4\left(-\frac{1}{6}\right)} \\ &= -\frac{6}{4} \\ &= -\frac{3}{2} \end{aligned}$$

The parabola opens downward and has focus $F\left(0, -\frac{3}{2}\right)$.

The directrix is the horizontal line $y = \frac{3}{2}$ which is a distance $\frac{3}{2}$ above V .

Example

- a) Find an equation of a parabola that has vertex at the origin, open right, and passes through the point $P(7, -3)$.
- b) Find the focus of the parabola.

Solution

- a) An equation of a parabola with vertex at the origin that opens right has the form $x = ay^2$

$$7 = a(-3)^2$$

$$a = \frac{7}{9}$$

The equation is: $x = \frac{7}{9}y^2$

b) $p = \frac{1}{4a}$

$$\begin{aligned} &= \frac{1}{4\left(\frac{7}{9}\right)} \\ &= \frac{9}{28} \end{aligned}$$

Thus, the focus has coordinate $\left(\frac{9}{28}, 0\right)$

Example

Sketch the graph of $2x = y^2 + 8y + 22$

Solution

$$2x - 22 = y^2 + 8y$$

$$y^2 + 8y + \left(\frac{1}{2}8\right)^2 = 2x - 22 + \left(\frac{1}{2}8\right)^2$$

$$(y + 4)^2 = 2x - 6$$

$$(y + 4)^2 = 2(x - 3)$$

The vertex is $V(h, k) = V(3, -4)$

$$\begin{aligned} \text{The focus is } F(h + p, k) &= F\left(3 + \frac{1}{2}, -4\right) \\ &= F\left(\frac{7}{2}, -4\right) \end{aligned}$$

$$\begin{aligned} \text{The directrix is } x = h - p &= 3 - \frac{1}{2} \\ &= \frac{5}{2} \end{aligned}$$

Example

A parabola has vertex $V(-4, 2)$ and directrix $y = 5$. Express the equation of the parabola in the form

$$y = ax^2 + bx + c$$

Solution

$$\text{Directrix: } y = k - p \Rightarrow p = k - y$$

$$p = 2 - 5$$

$$= -3$$

$$(x - h)^2 = 4p(y - k)$$

$$(x + 4)^2 = 4(-3)(y - 2)$$

$$(x + 4)^2 = -12(y - 2)$$

$$x^2 + 8x + 16 = -12y + 24$$

$$x^2 + 8x + 16 - 24 = -12y + 24 - 24$$

$$-12y = x^2 + 8x - 8$$

$$y = -\frac{1}{12}x^2 - \frac{2}{3}x + \frac{2}{3}$$

Exercises Section 1.4 – Quadratic Graphics

(1 – 21) For the Given functions

- Find the vertex point
- Find the line of symmetry
- State whether there is a *maximum* or *minimum* value and find that value
- Find the zeros of $f(x)$
- Find the y-intercept
- Find the *range* and the *domain* of the function.
- Graph the function and label, show part *a* thru *d*
- On what intervals is the function *increasing*? *decreasing*?

- | | | |
|------------------------------|----------------------------|-----------------------------|
| 1. $f(x) = x^2 + 6x + 3$ | 8. $f(x) = x^2 + 6x - 1$ | 15. $f(x) = -x^2 - 3x + 4$ |
| 2. $f(x) = x^2 + 6x + 5$ | 9. $f(x) = x^2 + 6x + 3$ | 16. $f(x) = -2x^2 + 3x - 1$ |
| 3. $f(x) = -x^2 - 6x - 5$ | 10. $f(x) = x^2 - 10x + 3$ | 17. $f(x) = -2x^2 - 3x - 1$ |
| 4. $f(x) = x^2 - 4x + 2$ | 11. $f(x) = x^2 - 3x + 4$ | 18. $f(x) = -x^2 - 4x + 5$ |
| 5. $f(x) = -2x^2 + 16x - 26$ | 12. $f(x) = x^2 - 3x - 4$ | 19. $f(x) = -x^2 + 4x + 2$ |
| 6. $f(x) = x^2 + 4x + 1$ | 13. $f(x) = x^2 - 4x - 5$ | 20. $f(x) = -3x^2 + 3x + 7$ |
| 7. $f(x) = x^2 - 8x + 5$ | 14. $f(x) = 2x^2 - 3x + 1$ | 21. $f(x) = -x^2 + 2x - 2$ |

(22 – 36) Find the vertex, focus, and directrix of the parabola. Sketch its graph.

- | | | |
|----------------------------------|-------------------------------|-----------------------------|
| 22. $20x = y^2$ | 27. $y = x^2 - 4x + 2$ | 32. $(y+1)^2 = -4(x-2)$ |
| 23. $2y^2 = -3x$ | 28. $y^2 + 14y + 4x + 45 = 0$ | 33. $x^2 + 6x - 4y + 1 = 0$ |
| 24. $(x+2)^2 = -8(y-1)$ | 29. $x^2 + 20y = 10$ | 34. $y^2 + 2y - x = 0$ |
| 25. $(x-3)^2 = \frac{1}{2}(y+1)$ | 30. $x^2 = 16y$ | 35. $y^2 - 4y + 4x + 4 = 0$ |
| 26. $(y+1)^2 = -12(x+2)$ | 31. $x^2 = -\frac{1}{2}y$ | 36. $x^2 - 4x - 4y = 4$ |

(37 – 45) Find an equation of the parabola that satisfies the given conditions

- | | |
|--|--|
| 37. Focus : $F(2,0)$ directrix : $x = -2$ | 42. Vertex : $V(-1,0)$ focus : $F(-4,0)$ |
