

SOLUTION

Section 4.1 – Relations and Their Properties

Exercise

List the ordered pairs in the relation R from $A = \{0, 1, 2, 3, 4\}$ to $B = \{0, 1, 2, 3\}$ where $(a, b) \in R$ if and only if

a) $a = b$

b) $a + b = 4$

c) $a > b$

d) $a \mid b$

e) $\gcd(a, b) = 1$

f) $\text{lcm}(a, b) = 2$

Solution

a) $\{(0, 0), (1, 1), (2, 2), (3, 3)\}$

b) $\{(4, 0), (1, 3), (3, 1), (2, 2)\}$

c) $\{(1, 0), (2, 0), (2, 1), (3, 0), (3, 1), (3, 2), (4, 0), (4, 1), (4, 2), (4, 3)\}$

d) $\{(1, 0), (1, 1), (1, 2), (1, 3), (2, 0), (2, 2), (3, 0), (3, 3), (4, 0)\}$ (means b is multiple of $a \neq 0$)

e) $\{(1, 0), (0, 1), (1, 1), (1, 2), (1, 3), (2, 1), (2, 3), (3, 1), (3, 2), (4, 1), (4, 3)\}$ (means *relatively prime*)

f) $\{(1, 2), (2, 1), (2, 2)\}$ (Mean *least common multiple* is 2).

Exercise

a) List all the ordered pairs in the relation $R = \{(a, b) \mid a \text{ divides } b\}$ on the set $\{1, 2, 3, 4, 5, 6\}$

b) Display this relation graphically.

c) Display this relation in tabular form.

Solution

a) $\{(1, 1), (1, 2), (1, 3), (1, 4), (1, 5), (1, 6), (2, 2), (2, 4), (2, 6), (3, 3), (3, 6), (4, 4), (5, 5), (6, 6)\}$

b)

c)

R	1	2	3	4	5	6
1	×	×	×	×	×	×
2		×		×		×
3			×			×
4				×		
5					×	
6						×

Exercise

For each of these relations on the set $\{1, 2, 3, 4\}$, decide whether it is reflexive, symmetric, antisymmetric and transitive

- a) $\{(2, 2), (2, 3), (2, 4), (3, 2), (3, 3), (3, 4)\}$
- b) $\{(1, 1), (1, 2), (2, 1), (2, 2), (3, 3), (4, 4)\}$
- c) $\{(2, 4), (4, 2)\}$
- d) $\{(1, 2), (2, 3), (3, 4)\}$
- e) $\{(1, 1), (2, 2), (3, 3), (4, 4)\}$
- f) $\{(1, 3), (1, 4), (2, 3), (2, 4), (3, 1), (3, 4)\}$

Solution

- a) This relation is not reflexive, since $(1, 1)$ is not included

It is not symmetric, since $(2, 4)$ is included but not $(4, 2)$

It is not antisymmetric, since it includes $(2, 3)$ and $(3, 2)$ but $2 \neq 3$

$(2, 3) \ \& \ (3, 4) \rightarrow (2, 4) \quad (3, 2) \ \& \ (2, 4) \rightarrow (3, 4)$
 $(2, 3) \ \& \ (3, 2) \rightarrow (2, 2) \quad (3, 2) \ \& \ (2, 3) \rightarrow (3, 3)$ It is transitive.

- b) This relation is reflexive, since $(1, 1), (2, 2), (3, 3)$, and $(4, 4)$ are included

It is symmetric, since $(2, 1)$ and $(1, 2)$ are included

It is not antisymmetric, since it includes $(2, 1)$ and $(1, 2)$ but $2 \neq 1$

$(2, 1) \ \& \ (1, 2) \rightarrow (2, 2)$
 $(1, 2) \ \& \ (2, 1) \rightarrow (1, 1)$ It is transitive.

- c) This relation is not reflexive, since $(1, 1)$ is not included

It is symmetric, since $(2, 4)$ and $(4, 2)$ are included

It is not antisymmetric, since it includes $(2, 4)$ and $(4, 2)$ but $2 \neq 4$

It is not transitive, since it includes $(2, 4)$ and $(4, 2)$ but not $(2, 2)$

- d) This relation is not reflexive, since $(1, 1)$ is not included

It is not symmetric, since $(1, 2)$ is included but not $(2, 1)$

It is antisymmetric, since no cases of (a, b) and (b, a) both being in the relation

It is not transitive, since it includes $(1, 2)$ and $(2, 3)$ but not $(1, 3)$

- e) This relation is reflexive, since $(1, 1), (2, 2), (3, 3)$, and $(4, 4)$ are included and it is *symmetric*

It is antisymmetric, since no cases of (a, b) and (b, a) both being in the relation

It is transitive, since the only time the hypothesis $(a, b) \in R \wedge (b, c) \in R$ is met is when $a \equiv b \equiv c$

- f) This relation is not reflexive, since $(1, 1)$ is not included

It is not symmetric, since $(1, 4)$ is included but not $(4, 1)$

It is not antisymmetric, since it includes $(1, 3)$ and $(3, 1)$

It is not transitive, since it includes $(2, 3)$ and $(3, 1)$ but not $(2, 1)$

Exercise

Determine whether the relation R on the set of all people is reflexive, symmetric, antisymmetric, and/or transitive, where $(a, b) \in R$ if and only if

- a) a is taller than b .
- b) a and b were born on the same day
- c) a has the same first name as b .
- d) a and b have a common grandparent.

Solution

- a) I am *not* taller than myself, therefore *being taller* is not reflexive
It is *not* symmetric, since I am taller than my kid but my kid is not
It is antisymmetric since we never have a taller than b and b taller than a even if $a = b$
It is transitive since if a taller than b and b taller than c that implies that A taller then c
- b) The relation is reflexive since a is born on the same day
It is symmetric, since a and b were born on the same day
It is *not* antisymmetric since a and b were born on the same day but $a \neq b$
It is transitive since if a and b were born on the same day and b and c were born on the same day that implies that a and c were born on the same day
- c) The relation is reflexive since a has the same first name as a
It is symmetric, since a has the same first name as b than b has the same first name as a
It is *not* antisymmetric since a has the same first name as b but $a \neq b$
It is transitive since if a has the same first name as b and c has the same first name as c that implies that a has the same first name as c
- d) The relation is reflexive since a and a have a common grandparent
It is symmetric, since a and b have a common grandparent than b and a have a common grandparent
It is *not* antisymmetric since a and b have a common grandparent but $a \neq b$
It is transitive since if a and b have a common grandparent and b and c have a common grandparent that implies that a and c have a common grandparent

Exercise

Determine whether the relation R on the set of all **real numbers** is reflexive, symmetric, antisymmetric, and/or transitive, where $(x, y) \in R$ if and only if

- a) $x + y = 0$
- b) $x = \pm y$
- c) $x - y$ is a rational number
- d) $x = 2y$
- e) $xy \geq 0$
- f) $xy = 0$
- g) $x = 1$
- h) $x = 1$ or $y = 1$

Solution

- a) The relation is *not* reflexive since $1 + 1 \neq 0$
It is symmetric, since $x + y = 0$ then $y + x = 0$ because $x + y = y + x$
It is *not* antisymmetric since $(1, -1) \in R$ and $(-1, 1) \in R$ but $1 \neq -1$

It is *not* transitive since $(1, -1)$ and $(-1, 1) \in \mathbf{R}$ but $(1, 1) \notin \mathbf{R}$

b) The relation is reflexive since $x = \pm x$

It is symmetric, since $x = \pm y$ iff $y = \pm x$

It is *not* antisymmetric since $(1, -1) \in \mathbf{R}$ and $(-1, 1) \in \mathbf{R}$ but $1 \neq -1$

It is transitive since the product 1's and -1's is ± 1

c) The relation is reflexive since $x - x = 0$ is a rational number

It is symmetric, since $x - y$ is rational, then $-(x - y) = y - x$

It is *not* antisymmetric since $(1, -1) \in \mathbf{R}$ but $(-1, 1) \in \mathbf{R}$ but $1 \neq -1$

It is transitive since $(x, y) \in \mathbf{R}$ then $x - y$ is a rational number $(y, z) \in \mathbf{R}$ then $x - y$ is a rational number, therefore $x - z$ is rational that means that $(x, z) \in \mathbf{R}$

d) The relation is *not* reflexive since $1 \neq 2 \cdot 1$

It is *not* symmetric, since $(2, 1) \in \mathbf{R}$ then $2 = 2 \cdot 1$ but $1 \neq 2 \cdot 2$ therefore $(1, 2) \notin \mathbf{R}$

It is antisymmetric since $x = 2y$ and $y = 2x$ that implies to $y = 2(2y) = 4y$ which $y = 0$

It is *not* transitive since $2 = 2 \cdot 1$ and $4 = 2 \cdot 2 \Rightarrow 4 \neq 2 \cdot 1$ so $(4, 1) \notin \mathbf{R}$

e) The relation is reflexive since $x^2 \geq 0$ always positive

It is symmetric, since $xy \geq 0 \Rightarrow yx \geq 0$

It is *not* antisymmetric since $(2, 3) \in \mathbf{R}$ and $(3, 2) \in \mathbf{R}$ but $2 \neq 3$

It is *not* transitive since $(1, 0) \in \mathbf{R} \Rightarrow 1 \cdot 0 \geq 0$ $(0, -1) \in \mathbf{R} \Rightarrow 0 \cdot (-1) \geq 0$ but

$1 \cdot (-1) \not\geq 0 \Rightarrow (1, -1) \notin \mathbf{R}$

f) $\boxed{xy = 0}$ The relation is *not* reflexive since $(1, 1) \notin \mathbf{R}$

It is symmetric, since $xy = 0 \rightarrow yx = 0$

It is antisymmetric since $(2, 0) \in \mathbf{R}$ and $(0, 2) \in \mathbf{R}$ but $2 \neq 0$

It is *not* transitive since $2 \cdot 0 = 0$ $(2, 0) \in \mathbf{R}$ and $0 \cdot (-2) = 0$ $(0, -2) \in \mathbf{R} \Rightarrow 2 \cdot (-2) \neq 0$ so $(2, -2) \notin \mathbf{R}$

g) The relation is *not* reflexive since $(2, 2) \notin \mathbf{R}$

It is *not* symmetric, since $(1, 2) \in \mathbf{R}$ but $(2, 1) \notin \mathbf{R}$

It is antisymmetric since $(x, y) \in \mathbf{R}$ and $(y, x) \in \mathbf{R}$ then $x = 1$ and $y = 1$, so $x = y$

It is transitive since $(x, y) \in \mathbf{R}$ and $(y, z) \in \mathbf{R}$ then $x = 1$ and $y = 1$, so $(x, z) \in \mathbf{R}$

h) The relation is *not* reflexive since $(2, 2) \notin \mathbf{R}$

It is symmetric, since $(1, 2) \in \mathbf{R}$ and $(2, 1) \in \mathbf{R}$

It is *not* antisymmetric since $(1, 2) \in \mathbf{R}$ and $(2, 1) \in \mathbf{R}$ but $1 \neq 2$

It is *not* transitive since $(2, 1) \in \mathbf{R}$ and $(1, 3) \in \mathbf{R}$ but $(2, 3) \notin \mathbf{R}$

Exercise

Determine whether the relation R on the set of all **integers numbers** is reflexive, symmetric, antisymmetric, and/or transitive, where $(x, y) \in R$ if and only if

- a) $x \neq y$ b) $xy \geq 1$ c) $x = y + 1$ or $x = y - 1$ d) $x \equiv y \pmod{7}$
e) x is a multiple of y f) $x = y^2$ g) $x \geq y^2$

Solution

- a) This relation is not reflexive, since $1 \neq 1$ for instance

It is symmetric, if $x \neq y \Rightarrow y \neq x$

It is *not* antisymmetric since $1 \neq 2 \Rightarrow 2 \neq 1$

It is *not* transitive since $1 \neq 2$ and $2 \neq 1 \Rightarrow 1 \neq 1$

- b) This relation is not reflexive, since $(0, 0)$ is not included ($0 \not\geq 1$)

It is symmetric, because $xy = yx$ (commutative property of multiplication)

It is *not* antisymmetric since $(2, 3)$ and $(3, 2)$ are both included

It is transitive holds between x and y if and only if either x and y are both positive or x and y are both negative

- c) This relation is *not* reflexive, since $(1, 1)$ is not included ($1 \neq 1 + 1$)

It is symmetric, because $x = y - 1$ is equivalent to $y = x + 1$

It is *not* antisymmetric since $(1, 2)$ and $(2, 1)$ are in the relation

It is *not* transitive since $(1, 2)$ and $(2, 1)$ are in the relation but $(1, 1)$ is not

- d) $x \equiv y \pmod{7}$ means that $x - y = 7t$ for some t .

This relation is reflexive since $x - x = 7 \cdot 0$

It is symmetric since is $x \equiv y \pmod{7}$ then $x - y = 7t$, therefore $y - x = 7(-t)$ so $y \equiv x \pmod{7}$

It is *not* antisymmetric since $1 \equiv 8 \pmod{7}$ and $8 \equiv 1 \pmod{7}$

It is transitive since $x \equiv y \pmod{7}$ means $x - y = 7t$ and $y \equiv z \pmod{7}$ means $y - z = 7s$

$x - y = x - y + y - z = 7t + 7s = 7(t + s)$; therefore $x \equiv z \pmod{7}$

- e) x is a multiple of y means that $x = ty$ for some t .

This relation is reflexive since $x = x \cdot 1$

It is *not* symmetric since is $6 = 3 \cdot 2$ but $2 \neq 3 \cdot 6$

It is *not* antisymmetric since 2 is multiple of -2 but $2 \neq -2$

It is transitive since $x = ty$ and $y = sz \Rightarrow x = ty = t(sz) = (ts)z$ therefore x is a multiply of z .

- f) This relation is *not* reflexive, since $3 \neq 3^2$

It is *not* symmetric since is $9 = 3^2$ but $3 \neq 9^2$

It is antisymmetric since $x = y^2$ and $y = x^2$

$$\Rightarrow x = y^2 = x^4$$

$$x - x^4 = 0$$

$$x(1 - x^3) = 0$$

$$x(1-x)(1+x+x^2)=0 \quad \rightarrow x=0, 1$$

$$x=y^2 \text{ and } y=x^2 \text{ when } x=y$$

It is *not* transitive since $81=9^2$ and $9=3^2$ but $81 \neq 3^2$

g) This relation is *not* reflexive, since $3 \not\geq 3^2$

It is *not* symmetric since is $9 \geq 3^2$ but $3 \not\geq 9^2$

It is antisymmetric since $x \geq y^2$ and $y \geq x^2$, only when $x=0, 1$.

It is transitive since $x \geq y^2$ and $y \geq z^2$

$$x \geq y^2$$

$$\geq (z^2)^2$$

$$= z^4$$

$$\geq z^2 \quad |$$

Exercise

Show that the relation $R = \emptyset$ on nonempty set S is symmetric and transitive, but not reflexive.

Solution

If $R = \emptyset$, then the hypothesis of the conditional statements in the definitions of symmetric and transitive are never true, so those statements are always true by definition.

$S \neq \emptyset$ the statement $(a, a) \in R$ is false for an element of S , so $\forall a (a, a) \in R$ is not true, thus R is not reflexive.

Exercise

Show that the relation $R = \emptyset$ on nonempty set $S = \emptyset$ is reflexive, symmetric and transitive.

Solution

Since the domain is empty, then the relation is vacuously reflexive, symmetric and transitive s

Exercise

Give an example of a relation on a set that is

- a) both symmetric and antisymmetric
- b) neither symmetric nor antisymmetric

Solution

- a) The empty set on $\{a\}$ – vacuously symmetric and antisymmetric
- b) $\{(a, b), (b, a), (a, c)\}$ on $\{a, b, c\}$

Exercise

A relation R is called **asymmetric** if $(a, b) \in R$ implies that $(b, a) \notin R$. Explore the notion of an asymmetric relation to the following

- a) $\{(2, 2), (2, 3), (2, 4), (3, 2), (3, 3), (3, 4)\}$
- b) $\{(1, 1), (1, 2), (2, 1), (2, 2), (3, 3), (4, 4)\}$
- c) $\{(2, 4), (4, 2)\}$
- d) $\{(1, 2), (2, 3), (3, 4)\}$
- e) $\{(1, 1), (2, 2), (3, 3), (4, 4)\}$
- f) $\{(1, 3), (1, 4), (2, 3), (2, 4), (3, 1), (3, 4)\}$
- g) a is taller than b .
- h) a and b were born on the same day
- i) a has the same first name as b .
- j) a and b have a common grandparent.

Solution

The relations (a), (b), and (c) are not *asymmetric* since they contain pairs of the form (x, x)

The relation (f) is not *asymmetric* since both $(1, 3)$ and $(3, 1)$ are in the relation

The relation (d) is not *asymmetric*

The relation (g) is *asymmetric* since if a taller than b , then b can't be taller than a .

The relation (h) is not *asymmetric* since a and b were born on the same day but $a \neq b$

The relation (i) is not *asymmetric* since a has the same first name as b but $a \neq b$

The relation (j) is not *asymmetric* since a and b have a common grandparent but $a \neq b$

Exercise

Let R be the relation $R = \{(a, b) \mid a < b\}$ on the set of integers. Find

- a) R^{-1}
- b) \bar{R}

Solution

$$a) \quad R^{-1} = \{(b, a) \mid (a, b) \in R\} = \{(b, a) \mid a < b\} = \{(a, b) \mid a > b\}$$

$$b) \quad \bar{R} = \{(b, a) \mid (a, b) \notin R\} = \{(b, a) \mid a \not< b\} = \{(a, b) \mid a \geq b\}$$

Exercise

Let R be the relation $R = \{(a, b) \mid a \text{ divides } b\}$ on the set of positive integers. Find

- a) R^{-1}
- b) \bar{R}

Solution

$$a) \quad R^{-1} = \{(a, b) \mid b \text{ divides } a\}$$

b) $\bar{R} = \{(a, b) \mid a \text{ does not divide } b\}$

Exercise

Let R be the relation on the set of all states in the U.S. consisting of pairs (a, b) where state a borders state b . Find

a) R^{-1} b) \bar{R}

Solution

a) Since this relation is symmetric, $R^{-1} = R$

b) This relation consists of all pairs (a, b) in which state a does not border state b .

Exercise

Let $R_1 = \{(1, 2), (2, 3), (3, 4)\}$ and

$R_2 = \{(1, 1), (1, 2), (2, 1), (2, 2), (2, 3), (3, 1), (3, 2), (3, 3), (3, 4)\}$ be relation from $\{1, 2, 3\}$ to $\{1, 2, 3, 4\}$.

Find

a) $R_1 \cup R_2$ b) $R_1 \cap R_2$ c) $R_1 - R_2$ d) $R_2 - R_1$

Solution

a) $R_1 \cup R_2 = \{(1, 1), (1, 2), (2, 1), (2, 2), (2, 3), (3, 1), (3, 2), (3, 3), (3, 4)\} = R_2$

b) $R_1 \cap R_2 = \{(1, 2), (2, 3), (3, 4)\} = R_1$

c) $R_1 - R_2 = \emptyset$

d) $R_2 - R_1 = \{(1, 1), (2, 1), (2, 2), (3, 1), (3, 2), (3, 3)\}$

Exercise

Let the relation $R = \{(1, 2), (1, 3), (2, 3), (2, 4), (3, 1)\}$ and the relation $S = \{(2, 1), (3, 1), (3, 2), (4, 2)\}$ Find $S \circ R$

Solution

$(1, 2) \in R \text{ and } (2, 1) \in S \Rightarrow (1, 1) \in S \circ R$

$(1, 3) \in R \text{ and } (3, 2) \in S \Rightarrow (1, 2) \in S \circ R$

$(2, 3) \in R \text{ and } (3, 1) \in S \Rightarrow (2, 1) \in S \circ R$

$(2, 4) \in R \text{ and } (4, 2) \in S \Rightarrow (2, 2) \in S \circ R$

$$S \circ R = \{(1, 1), (1, 2), (2, 1), (2, 2)\}$$

Exercise

$$R_1 = \{(a, b) \in \mathbf{R}^2 \mid a > b\}$$

$$R_3 = \{(a, b) \in \mathbf{R}^2 \mid a < b\}$$

$$R_5 = \{(a, b) \in \mathbf{R}^2 \mid a = b\}$$

$$R_2 = \{(a, b) \in \mathbf{R}^2 \mid a \geq b\}$$

$$R_4 = \{(a, b) \in \mathbf{R}^2 \mid a \leq b\}$$

$$R_6 = \{(a, b) \in \mathbf{R}^2 \mid a \neq b\}$$

Find the following:

$$a) \quad R_1 \cup R_3$$

$$b) \quad R_1 \cup R_5$$

$$c) \quad R_2 \cap R_4$$

$$d) \quad R_3 \cap R_5$$

$$e) \quad R_1 - R_2$$

$$f) \quad R_2 - R_1$$

$$g) \quad R_1 \oplus R_3$$

$$h) \quad R_2 \oplus R_4$$

$$i) \quad R_1 \circ R_1$$

$$j) \quad R_1 \circ R_2$$

$$k) \quad R_1 \circ R_3$$

$$l) \quad R_1 \circ R_4$$

$$m) \quad R_1 \circ R_5$$

$$n) \quad R_1 \circ R_6$$

$$o) \quad R_2 \circ R_3$$

Solution

$$\begin{aligned} a) \quad R_1 \cup R_3 &= \{(a, b) \in \mathbf{R}^2 \mid a > b \text{ or } a < b\} \\ &= \{(a, b) \in \mathbf{R}^2 \mid a \neq b\} \\ &= R_6 \end{aligned}$$

$$\begin{aligned} b) \quad R_1 \cup R_5 &= \{(a, b) \in \mathbf{R}^2 \mid a > b \text{ or } a = b\} \\ &= \{(a, b) \in \mathbf{R}^2 \mid a \leq b\} \\ &= R_2 \end{aligned}$$

$$\begin{aligned} c) \quad R_2 \cap R_4 &= \{(a, b) \in \mathbf{R}^2 \mid a \geq b \text{ and } a \leq b\} \\ &= \{(a, b) \in \mathbf{R}^2 \mid a = b\} \\ &= R_5 \end{aligned}$$

$$\begin{aligned} d) \quad R_3 \cap R_5 &= \{(a, b) \in \mathbf{R}^2 \mid a < b \text{ and } a = b\} \\ &= \emptyset \end{aligned}$$

$$\begin{aligned} e) \quad R_1 - R_2 &= R_1 \cap \bar{R}_2 \\ &= \{(a, b) \in \mathbf{R}^2 \mid a > b \text{ and } a < b\} \\ &= \emptyset \end{aligned}$$

$$\begin{aligned} f) \quad R_2 - R_1 &= R_2 \cap \bar{R}_1 \\ &= \{(a, b) \in \mathbf{R}^2 \mid a \geq b \text{ and } a \leq b\} \\ &= \{(a, b) \in \mathbf{R}^2 \mid a = b\} \end{aligned}$$

$$= R_5$$

$$\begin{aligned} g) \quad R_1 \oplus R_3 &= (R_1 \cap \bar{R}_3) \cup (R_3 \cap \bar{R}_1) \\ &= \{(a, b) \in \mathbf{R}^2 \mid a > b \text{ and } a \geq b\} \cup \{(a, b) \in \mathbf{R}^2 \mid a < b \text{ and } a \leq b\} \\ &= R_1 \cup R_3 \quad \text{(From part a)} \\ &= R_6 \end{aligned}$$

$$\begin{aligned} h) \quad R_2 \oplus R_4 &= (R_2 \cap \bar{R}_4) \cup (R_4 \cap \bar{R}_2) \\ &= \{(a, b) \in \mathbf{R}^2 \mid a \geq b \text{ and } a > b\} \cup \{(a, b) \in \mathbf{R}^2 \mid a \leq b \text{ and } a < b\} \\ &= R_1 \cup R_3 \quad \text{(From part a)} \\ &= R_6 \end{aligned}$$

$$\begin{aligned} i) \quad R_1 \circ R_1 &= \{(a, b) \in R_1 \text{ and } (b, c) \in R_1\} \\ &= \{a > b \text{ and } b > c \Rightarrow a > c \text{ (clearly) that means } (a, c) \in R_1 \text{ (Transitive)}\}. \\ \text{Therefore, } R_1 \circ R_1 &= R_1 \end{aligned}$$

$$\begin{aligned} j) \quad R_1 \circ R_2 &= \{(a, b) \in R_2 \text{ and } (b, c) \in R_1\} \\ &= \{a \geq b \text{ and } b > c \Rightarrow a > c \text{ (clearly) that means } (a, c) \in R_1\}. \text{ Therefore, } R_1 \circ R_2 = R_1 \end{aligned}$$

$$\begin{aligned} k) \quad R_1 \circ R_3 &= \{(a, b) \in R_3 \text{ and } (b, c) \in R_1\} \\ &= \{a < b \text{ and } b > c\}. \text{ Therefore, } R_1 \circ R_3 = \mathbf{R}^2 \end{aligned}$$

$$\begin{aligned} l) \quad R_1 \circ R_4 &= \{(a, b) \in R_4 \text{ and } (b, c) \in R_1\} \\ &= \{a \leq b \text{ and } b > c\}. \text{ Clearly this can always be done simply by choosing } b \text{ to be large enough.} \\ \text{Therefore, } R_1 \circ R_4 &= \mathbf{R}^2 \end{aligned}$$

$$\begin{aligned} m) \quad R_1 \circ R_5 &= \{(a, b) \in R_5 \text{ and } (b, c) \in R_1\} \\ &= \{a = b \text{ and } b > c \text{ iff } a > c\}. \text{ Therefore, } R_1 \circ R_5 = R_1 \end{aligned}$$

$$\begin{aligned} n) \quad R_1 \circ R_6 &= \{(a, b) \in R_6 \text{ and } (b, c) \in R_1\} \\ &= \{a \neq b \text{ and } b > c\}. \text{ Clearly this can always be done simply by choosing } b \text{ to be large enough.} \\ \text{Therefore, } R_1 \circ R_6 &= \mathbf{R}^2 \end{aligned}$$

$$\begin{aligned} o) \quad R_2 \circ R_3 &= \{(a, b) \in R_3 \text{ and } (b, c) \in R_2\} \\ &= \{a < b \text{ and } b \geq c\}. \text{ Clearly this can always be done simply by choosing } b \text{ to be large enough.} \\ \text{Therefore, } R_2 \circ R_3 &= \mathbf{R}^2 \end{aligned}$$

Exercise

Let R_1 and R_2 be the “divides” and “is a multiple of” relations on the set of all positive integers, respectively.

That is $R_1 = \{(a, b) / a \text{ divides } b\}$ and $R_2 = \{(a, b) / a \text{ is a multiple of } b\}$

Find the following:

$$a) R_1 \cup R_2 \quad b) R_1 \cap R_2 \quad c) R_1 - R_2 \quad d) R_2 - R_1 \quad e) R_1 \oplus R_2$$

Solution

- a) $(a, b) \in R_1 \cup R_2$ if and only if a/b or b/a
- b) $(a, b) \in R_1 \cup R_2$ if and only if a/b and b/a with $a = \pm b$ and $a \neq 0$
- c) $R_1 - R_2 = R_1 \cap \bar{R}_2$ this relation holds between 2 integers if R_1 holds and R_2 does not hold.
 $(a, b) \in R_1 \cap \bar{R}_2$ if and only if a/b and b/a ($a \neq \pm b$)
- d) $R_2 - R_1 = R_2 \cap \bar{R}_1$ this relation holds between 2 integers if R_2 holds and R_1 does not hold.
 $(a, b) \in R_2 \cap \bar{R}_1$ if and only if b/a and a/b ($a \neq \pm b$)
- e) $R_1 \oplus R_2 = (R_1 - R_2) \cup (R_2 - R_1)$ this relation holds between 2 integers if R_2 holds and R_1 does not hold and R_2 holds and R_1 does not hold. if and only if a/b or b/a ($a \neq \pm b$)
