

## Homework

Solve the system of linear equations

$$\begin{array}{l} 1. \left\{ \begin{array}{l} x_1 - x_2 = 0 \\ 3x_1 - 2x_2 = -1 \end{array} \right. \quad \left| \quad 2. \left\{ \begin{array}{l} 3x + 2y = 2 \\ 6x + 4y = 14 \end{array} \right. \quad \left| \quad 3. \left\{ \begin{array}{l} 3x_1 - 2x_2 + 4x_3 = 1 \\ x_1 + x_2 - 2x_3 = 3 \\ 2x_1 - 3x_2 + 6x_3 = 8 \end{array} \right. \right. \end{array}$$

Determine the size of the matrix

$$4. \begin{bmatrix} 1 & 2 & -4 \\ 3 & 4 & 6 \\ 0 & 1 & 2 \end{bmatrix} \quad \left| \quad 5. \begin{bmatrix} 2 & 1 & -1 & -1 \\ -6 & 2 & 0 & 1 \end{bmatrix}$$

Find the solution set of the system of linear equations represented by the augmented matrix.

$$6. \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 2 \end{bmatrix} \quad \left| \quad 7. \begin{bmatrix} 1 & -1 & 0 & 3 \\ 0 & 1 & -2 & 1 \\ 0 & 0 & 1 & -1 \end{bmatrix}$$

8. Determine whether the matrix is in row-echelon form. If it is, determine whether it is also in reduced row-echelon form.

$$\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 1 & 2 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

Solve the system using either Gaussian elimination or Gauss-Jordan elimination

$$9. \left\{ \begin{array}{l} x_1 - 3x_3 = -2 \\ 3x_1 + x_2 - 2x_3 = 5 \\ 2x_1 + 2x_2 + x_3 = 4 \end{array} \right. \quad \left| \quad 10. \left\{ \begin{array}{l} 2x_1 + 3x_3 = 3 \\ 4x_1 - 3x_2 + 7x_3 = 5 \\ 8x_1 - 9x_2 + 15x_3 = 10 \end{array} \right.$$

11. Assume that the matrix is the augmented matrix of a system of linear equations, and

$$\begin{bmatrix} 1 & k & 2 \\ -3 & 4 & 1 \end{bmatrix}$$

- Determine the number of equations and the number of variables.
- Find the value(s) of  $k$  such that the system is consistent.
- Determine the number of equations and the number of variables but if the matrix is the coefficient matrix of a *homogeneous* system of linear equations.
- Find the value(s) of  $k$  from part (c).
