

Assignment

YOU MUST SHOW ALL YOUR WORK. (One sided paper and it is not a **group** assignment)

1. Given the matrix $A = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$.

a) Show that if $(a-d)^2 + 4bc > 0$ and $bc \neq 0$, then prove that the eigenvectors of A are

$$\lambda_1 = \frac{1}{2} \left[(a+d) + \sqrt{(a-d)^2 + 4bc} \right] \quad \text{and} \quad \lambda_2 = \frac{1}{2} \left[(a+d) - \sqrt{(a-d)^2 + 4bc} \right]$$

and the eigenvalues are $\begin{bmatrix} -b \\ a - \lambda_1 \end{bmatrix}$ and $\begin{bmatrix} -b \\ a - \lambda_2 \end{bmatrix}$ respectively.

b) If $(a-d)^2 + 4bc > 0$ and $bc = 0$ (*3 parts*), determine the eigenvalues and the eigenvectors of A .
