For the given function $f(x)=\dfrac{2x+1}{x-3}$

a) Is $f(x)$ one-to-one function

b) Find $f^{-1}(x)$, if it exists

c) Find the domain and range of $f(x)$ and $f^{-1}(x)$

Find the exact decibel rating of a sound with intensity $10,000 I_0$

Solution

$$\begin{aligned} d &= 10\log\frac{10000 I_0}{I_0} \\ &= 10\log 10000 \\ &= 40 \ \ db \end{aligned}$$

Exercise

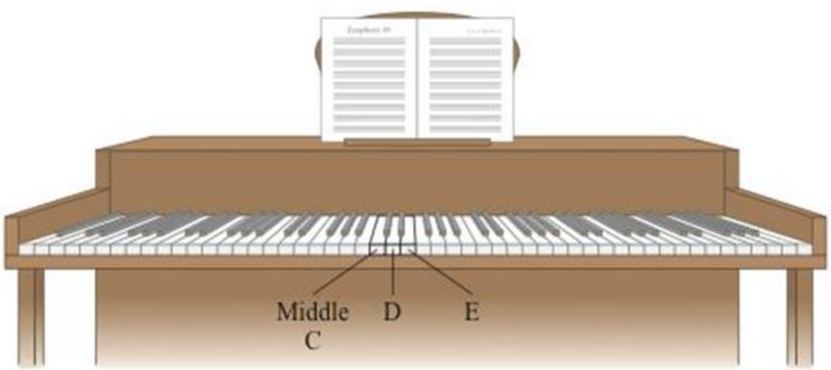
Starting on the left side of a standard 88–*key* piano, the frequency, in *vibrations* per *second*, of the *n*th note is given by

$$f(n) = (27.5)\ 2^{\frac{n-1}{12}}$$



a) Determine the frequency of middle *C*, key number 40 on an 88–*key* piano.

b) Is the difference in frequency between middle *C* (key number 40) and *D* (key number 42) the same as the difference in frequency between *D* (key number 42) and *E* (key number 44)?

Solution

a) $f(40) = (27.5)\ 2^{\frac{40-1}{12}}$

≈ 261.63

the frequency of middle *C* is ≈ 262 *vibrations* per *second*.

b) $f(42) = (27.5)\ 2^{(41/12)}$

≈ 293.66

The difference between the frequency of middle *C* and *D* is: $293.66 - 261.66 \approx 32$

$f(44) = (27.5)\ 2^{(43/12)}$

≈ 329.63

The difference between the frequency of middle D and E is: $329.63 - 293.66 \approx 36$

$\therefore$ The differences are ***not*** the same since the function is *not* linear function.
