### **Section 8.6 – Polar Coordinates**

To reach the point whose address is (2, 1), we start from origin and travel 2 units right and then 1 unit up. Another way to get to that point, we can travel  $\sqrt{5}$  units on the terminal side of an angle in standard position and this type is called *Polar Coordinates*.

#### **Definition** of Polar Coordinates

To define polar coordinates, let an *origin* O (called the *pole*) and an *initial ray* from O. Then each point P can be located by assigning to it a *polar coordinate pair*  $(r, \theta)$  in which r gives the directed from O to P and  $\theta$  gives the directed angle from the initial ray to yay OP.

#### **Polar Coordinates**

$$P(r, \theta)$$
Directed distance from  $O$  to  $P$ 
Directed angle from initial ray to  $OP$ 

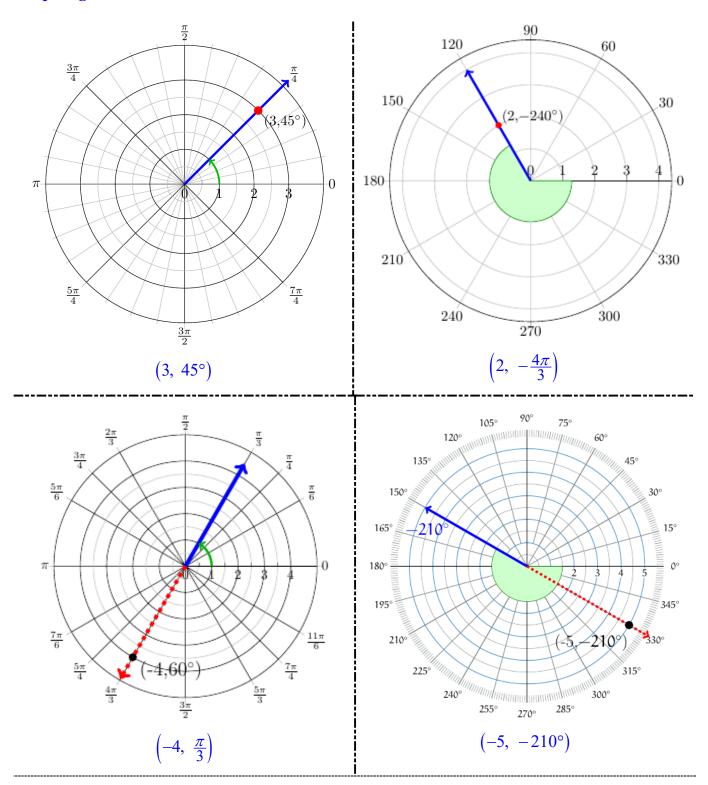

### **Definition** – Relationships between Rectangular and Polar Coordinates

The rectangular coordinates (x, y) and polar coordinates  $(r, \theta)$  of a point P are related as follows:

1. 
$$x = r\cos\theta$$
,  $y = r\sin\theta$ 

**2.** 
$$r^2 = x^2 + y^2$$
  $\tan \theta = \frac{y}{x}$  if  $x \neq 0$ 

## **Graphing Polar Coordinates**

### Example

If  $(r, \theta) = (4, \frac{7\pi}{6})$  are polar coordinates of a point P, find the rectangular coordinates of P.

#### Solution

$$x = r \cos \theta$$

$$= 4 \cos \frac{7\pi}{6}$$

$$= 4 \left( -\frac{\sqrt{3}}{2} \right)$$

$$= -2\sqrt{3}$$

$$y = r \sin \theta$$

$$= 4 \sin \frac{7\pi}{6}$$

$$= 4 \left( -\frac{1}{2} \right)$$

$$= -2$$

The rectangular coordinates of P are  $(x, y) = (-2\sqrt{3}, -2)$ 

#### Example

If  $(x, y) = (-1, \sqrt{3})$  are rectangular coordinates of a point P, find three different pairs the polar coordinates of P.

#### Solution

$$r = \pm \sqrt{x^2 + y^2}$$

$$= \pm \sqrt{(-1)^2 + (\sqrt{3})^2}$$

$$= \pm \sqrt{1+3}$$

$$= \pm \sqrt{4}$$

$$= \pm 2 \rfloor$$

$$\tan \theta = \frac{y}{x} = \frac{\sqrt{3}}{-1}$$

$$= -\sqrt{3} \rfloor$$

$$\hat{\theta} = \tan^{-1}(\sqrt{3}) = \frac{\pi}{3}$$

$$\theta_1 = \pi - \frac{\pi}{3} = \frac{2\pi}{3}$$

$$\theta_2 = \frac{2\pi}{3} + 2\pi = \frac{3\pi}{3}$$

$$\theta_3 = -\frac{\pi}{3}$$

The polar coordinates of P are:  $\left(2, \frac{2\pi}{3}\right), \left(-2, \frac{5\pi}{3}\right), \left(2, -\frac{4\pi}{3}\right), \text{ and } \left(-2, -\frac{\pi}{3}\right)$ 

### Example

Find a polar equation of an arbitrary line.

#### Solution

An equation of a line can be written in the form: ax + by = c.

$$ax + by = c$$

$$ar\cos\theta + br\sin\theta = c$$

$$r(a\cos\theta + b\sin\theta) = c$$

$$r = \frac{c}{a\cos\theta + b\sin\theta}$$

### **Example**

Find a polar equation of the hyperbola  $x^2 - y^2 = 16$ .

#### Solution

$$(r\cos\theta)^2 - (r\sin\theta)^2 = 16$$

$$r^2\cos^2\theta - r^2\sin^2\theta = 16$$

$$r^2 \left(\cos^2 \theta - \sin^2 \theta\right) = 16$$

$$r^2(\cos 2\theta) = 16$$

$$r^2 = \frac{16}{\cos 2\theta} \qquad \cos 2\theta \neq 0$$

or 
$$r^2 = 16 \sec 2\theta$$

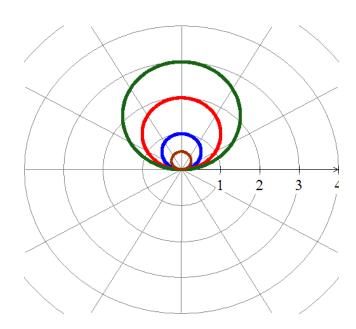

### Example

Find an equation in x and y that has the same graph as the polar equation  $r = a \sin \theta$ ,  $a \ne 0$ . Sketch the graph.

#### **Solution**

$$r^2 = ar\sin\theta$$

$$x^2 + y^2 = ay$$

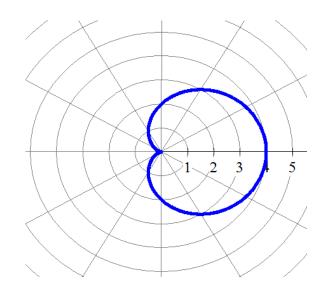

### **Example**

Sketch the graph of the polar equation  $r = 2 + 2\cos\theta$ .

### **Solution**

$\boldsymbol{\theta}$	r
0	4
$\frac{\pi}{4}$	$2+\sqrt{2}$
$\frac{\pi}{2}$	2
$\frac{3\pi}{4}$	$2-\sqrt{2}$
$\pi$	0
$\frac{3\pi}{2}$	2
$2\pi$	4

# **Exercises** Section 8.6 – Polar Coordinates

(1-6) Convert to rectangular coordinates

5. 
$$(\sqrt{2}, -225^{\circ})$$

**2.** 
$$\left(-\sqrt{2}, \frac{3\pi}{4}\right)$$

4. 
$$(2, 60^{\circ})$$

**6.** 
$$\left(4\sqrt{3}, -\frac{\pi}{6}\right)$$

- 7. Change the polar coordinates to rectangular coordinates  $\left(-2, \frac{7\pi}{6}\right)$
- **8.** Change the polar coordinates to rectangular coordinates  $\left(6, \arctan \frac{3}{4}\right)$
- **9.** Change the polar coordinates to rectangular coordinates  $\left(10, \arccos\left(-\frac{1}{3}\right)\right)$

(10-16) Convert to polar coordinates

**13.** 
$$(-3, -3)$$
  $r \ge 0$   $0^{\circ} \le \theta < 360^{\circ}$ 

**14.** 
$$(2, -2\sqrt{3})$$
  $r \ge 0$   $0^{\circ} \le \theta < 360^{\circ}$ 

12. 
$$(-1, \sqrt{3})$$

**15.** 
$$(-2, 0)$$
  $r \ge 0$   $0 \le \theta < 2\pi$ 

**16.** 
$$\left(-1, -\sqrt{3}\right)$$
  $r \ge 0$   $0 \le \theta < 2\pi$ 

- 17. Change the rectangular coordinates to polar coordinates  $(7, -7\sqrt{3})$  r > 0  $0 \le \theta < 2\pi$
- **18.** Change the rectangular coordinates to polar coordinates  $\left(-2\sqrt{2}, -2\sqrt{2}\right)$  r > 0  $0 \le \theta < 2\pi$
- 19. The point (0, -3) in rectangular coordinates is equivalent to  $(3, 270^{\circ})$  in polar coordinates.
- **20.** The point (1, -1) in rectangular coordinates is equivalent to  $\left(-\sqrt{2}, \frac{3\pi}{4}\right)$  in polar coordinates.
- **21.** A point lies at (4, 4) on a rectangular coordinate system. Give its address in polar coordinates  $(r, \theta)$

(22-34) Write the equation in rectangular coordinates

**22.** 
$$r^2 = 4$$

$$27. \quad r\sin\theta = -2$$

$$31. \quad r(\sin\theta - 2\cos\theta) = 6$$

23. 
$$r = 6\cos\theta$$

**28.** 
$$\theta = \frac{\pi}{4}$$

$$32. \quad r = 8\sin\theta - 2\cos\theta$$

**24.** 
$$r^2 = 4\cos 2\theta$$

**29.** 
$$r^2 \left( 4\sin^2 \theta - 9\cos^2 \theta \right) = 36$$

33. 
$$r = \tan \theta$$

$$25. \quad r(\cos\theta - \sin\theta) = 2$$

$$34. \quad r\!\left(\sin\theta + r\cos^2\theta\right) = 1$$

**26.** 
$$r^2 = 4\sin 2\theta$$

$$30. \quad r^2 \left(\cos^2 \theta + 4\sin^2 \theta\right) = 16$$

(35-38) Find a polar equation that has the same graph as the equation in x and y

**35.** 
$$y^2 = 6x$$

**37.** 
$$(x+2)^2 + (y-3)^2 = 13$$

**36.** 
$$xy = 8$$

38. 
$$y^2 - x^2 = 4$$

(39-42) Write the equation in polar coordinates

**39.** 
$$x + y = 5$$

**41.** 
$$x^2 + y^2 = 4x$$

**43.** 
$$x + y = 4$$

**40.** 
$$x^2 + y^2 = 9$$

**42.** 
$$y = -x$$

(44 - 54) Sketch the graph of the polar equation

**44.** 
$$r = 5$$

**48.** 
$$r = 2 - \cos \theta$$

**52.** 
$$r = e^{2\theta}$$
  $\theta \ge 0$ 

**45.** 
$$\theta = \frac{\pi}{4}$$

49. 
$$r = 4 \csc \theta$$

**53.** 
$$r\theta = 1 \quad \theta > 0$$

**46.** 
$$r = 4\cos\theta + 2\sin\theta$$

$$50. \quad r^2 = 4\cos 2\theta$$

**54.** 
$$r = 2 + 2\sec\theta$$

**47.** 
$$r = 2 + 4\sin\theta$$

**51.** 
$$r = 2^{\theta}$$
  $\theta \ge 0$
