Section 3.3 – Double Integrals in Polar Coordinates

Integrals in Polar Coordinates

If f is continuous throughout R, this sum will approach a limit as Δr and $\Delta \theta$ go to zero. The limit is called the double integral of f over R.

$$\lim_{n \to \infty} S_n = \iint_R f(r, \theta) \, dA$$

However, the area of a wedge-shaped sector of a circle having radius r and angle θ is

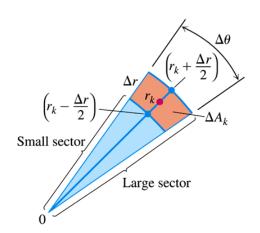

$$A = \frac{1}{2}\theta \cdot r^2$$

Inner radius:
$$\frac{1}{2} \left(r_k - \frac{\Delta r}{2} \right)^2 \cdot \Delta \theta$$

outer radius:
$$\frac{1}{2} \left(r_k + \frac{\Delta r}{2} \right)^2 \cdot \Delta \theta$$

$$\Delta A_k = \begin{pmatrix} area \ of \\ large \ sector \end{pmatrix} - \begin{pmatrix} area \ of \\ small \ sector \end{pmatrix}$$

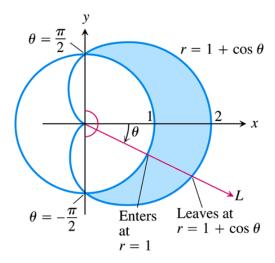

Leads to the formula:
$$\Delta A_k = r_k \Delta r \Delta \theta$$

Find the limits of integration for integrating $f(r,\theta)$ over the region R that lies inside the cardioid $r = 1 + \cos \theta$ and outside the circle r = 1.

Solution

The sketch of the region:

From the graph, we can find the r - limits of integration. A typical ray from the origin enters R where r = 1 and leaves where $r = 1 + \cos \theta$

 θ - limits of integration: The rays from the origin that intersects R run from $\theta = -\frac{\pi}{2}$ to $\theta = \frac{\pi}{2}$. The integral is

$$\int_{-\frac{\pi}{2}}^{\frac{\pi}{2}} \int_{1}^{1+\cos\theta} f(r,\theta) r \, dr \, d\theta$$

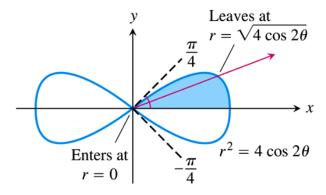

Area in Polar Coordinates

The area of a closed and bounded region R in the polar coordinate plane is

$$A = \iint_{R} r \ dr \ d\theta$$

Find the area enclosed by the lemniscate $r^2 = 4\cos 2\theta$

Solution

From the graph, we can determine the lemniscate limits of integration, and the total area is 4 times the first-quadrant portion, since it has a form of symmetry.

$$A = 4 \int_{0}^{\pi/4} \int_{0}^{\sqrt{4\cos 2\theta}} r \, dr d\theta$$

$$= 4 \int_{0}^{\pi/4} \frac{1}{2} r^{2} \, \left| \frac{\sqrt{4\cos 2\theta}}{0} \, d\theta \right|$$

$$= 4 \int_{0}^{\pi/4} (2\cos 2\theta) \, d\theta$$

$$= 4 \int_{0}^{\pi/4} \cos 2\theta \, d(2\theta)$$

$$= 4\sin 2\theta \, \left| \frac{\pi/4}{0} \right|$$

$$= 4\sin \frac{\pi}{2}$$

$$= 4 \quad unit^{2}$$

Changing Cartesian Integrals into Polar Integrals

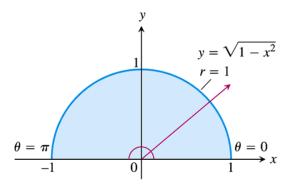

$$\iint_{R} f(x,y) dxdy = \iint_{G} f(r\cos\theta, r\sin\theta) r drd\theta$$

Example

Evaluate
$$\iint_{R} e^{x^2 + y^2} dy dx$$

Where R is the semicircular region bounded by the x-axis and the curve $y = \sqrt{1-x^2}$

Solution

$$\iint_{R} e^{x^{2}+y^{2}} dy dx = \int_{0}^{\pi} \int_{0}^{1} e^{r^{2}} r dr d\theta$$

$$= \frac{1}{2} \int_{0}^{\pi} d\theta \int_{0}^{1} e^{r^{2}} d(r^{2})$$

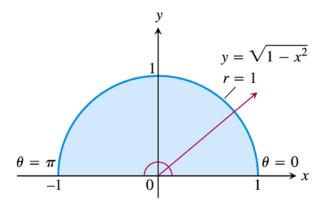

$$= \frac{1}{2} \theta \begin{vmatrix} \pi \\ 0 \end{vmatrix} e^{r^{2}} \begin{vmatrix} 1 \\ 0 \end{vmatrix}$$

$$= \frac{1}{2} \int_{0}^{\pi} (e-1) d\theta$$

$$= \frac{\pi}{2} (e-1)$$

Evaluate the integral
$$\int_{0}^{1} \int_{0}^{\sqrt{1-x^2}} \left(x^2 + y^2\right) dy dx$$

Solution

Since: $0 \le x \le 1 \rightarrow interior \ of \ x^2 + y^2 = 1 \ and \ in \ QI$

Let:
$$r^2 = x^2 + y^2$$
 with $0 \le r \le 1$

$$\int_{0}^{1} \int_{0}^{\sqrt{1-x^2}} \left(x^2 + y^2\right) dy dx = \int_{0}^{\pi/2} \int_{0}^{1} \left(r^2\right) r dr d\theta$$

$$= \int_{0}^{\pi/2} d\theta \int_{0}^{1} r^3 dr$$

$$= \theta \begin{vmatrix} \pi/2 & \frac{1}{4}r^4 \end{vmatrix}_{0}^{1}$$

$$= \frac{\pi}{8}$$

o Or we can use the integral table to solve it

$$\int_{0}^{1} \int_{0}^{\sqrt{1-x^{2}}} \left(x^{2} + y^{2}\right) dy dx = \int_{0}^{1} \left[x^{2} \sqrt{1-x^{2}} + \frac{1}{3} \left(1 - x^{2}\right)^{3}\right] dx$$

Find the volume of the solid region bounded above by the paraboloid $z = 9 - x^2 - y^2$ and below by the unit circle in the xy-plane.

Solution

The region of integration R is the unit circle:

$$x^2 + y^2 = 1 \rightarrow r = 1, \quad 0 \le \theta \le 2\pi$$

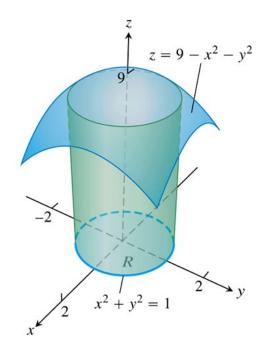

$$Volume = \int_0^{2\pi} \int_0^1 \left(9 - r^2\right) r \, dr d\theta$$

$$= \int_0^{2\pi} d\theta \int_0^1 \left(9r - r^3\right) dr$$

$$= 2\pi \left(\frac{9}{2}r^2 - \frac{1}{4}r^4\right) \Big|_0^1$$

$$= 2\pi \left(\frac{9}{2} - \frac{1}{4}\right)$$

$$= \frac{17\pi}{2} \quad unit^3$$

Example

Using the polar integration, find the area of the region *R* in the *xy*-plane enclosed by the circle $x^2 + y^2 = 4$, above the line y = 1, and below the line $y = \sqrt{3}x$.

Solution

The $y = \sqrt{3}x$ has a slope of $\sqrt{3} = \tan \theta \implies \theta = \frac{\pi}{3}$

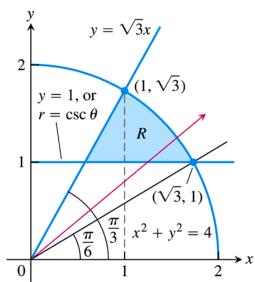

Line y = 1 intersects $x^2 + y^2 = 4$

when $x^2 + 1 = 4 \to x = \sqrt{3}$.

A line from origin to $(\sqrt{3}, 1)$ has a slope of

$$\frac{1}{\sqrt{3}} = \tan \theta \to \underline{\theta} = \frac{\pi}{6}$$

$$\therefore \quad \frac{\pi}{6} \le \theta \le \frac{\pi}{3}$$

The polar coordinate r varies from the horizontal line y = 1 to the circle $x^2 + y^2 = 4$. Substituting $r \sin \theta$ for y:

$$y = 1 \rightarrow r \sin \theta = 1$$

$$r = \frac{1}{\sin \theta} = \frac{\csc \theta}{\sin \theta}$$

The radius of the circle is 2.

$$\therefore \csc \theta \le r \le 2$$

$$Area = \int_{\pi/6}^{\pi/3} \int_{\csc\theta}^{2} r \, dr d\theta$$

$$= \int_{\pi/6}^{\pi/3} \frac{1}{2} r^2 \, \left| \frac{2}{\csc\theta} \, d\theta \right|$$

$$= \frac{1}{2} \int_{\pi/6}^{\pi/3} \left(4 - \csc^2\theta \right) d\theta$$

$$= \frac{1}{2} \left(4\theta + \cot\theta \, \left| \frac{\pi/3}{\pi/6} \right| \right)$$

$$= \frac{1}{2} \left[\frac{4\pi}{3} + \frac{1}{\sqrt{3}} - \left(\frac{4\pi}{6} + \sqrt{3} \right) \right]$$

$$= \frac{1}{2} \left(\frac{2\pi}{3} + \frac{\sqrt{3}}{3} - \sqrt{3} \right)$$

$$= \frac{1}{2} \left(\frac{2\pi - 2\sqrt{3}}{3} \right)$$

$$= \frac{\pi - \sqrt{3}}{3} \quad unit^2$$

Example

Evaluate the double integral: $\int \int e^{-x^2 - y^2} dA$

In the first quadrant and bounded by the circle $x^2 + y^2 = a^2$ and the coordinate axes.

Solution

$$x^2 + y^2 = r^2$$
$$0 \le r \le a$$

In
$$QI: 0 \le \theta \le \frac{\pi}{2}$$

$$\iint e^{-x^2 - y^2} dA = \int_0^{\frac{\pi}{2}} \int_0^a e^{-r^2} r \, dr d\theta$$

$$= -\frac{1}{2} \int_0^{\frac{\pi}{2}} d\theta \int_0^a e^{-r^2} \, d(-r^2)$$

$$= -\frac{1}{2} \theta \begin{vmatrix} \frac{\pi}{2} \\ 0 \end{vmatrix} e^{-r^2} \begin{vmatrix} a \\ 0 \end{vmatrix}$$

$$= -\frac{1}{2} (\frac{\pi}{2}) (e^{-a^2} - 1)$$

$$= \frac{\pi}{4} (1 - e^{-a^2}) \begin{vmatrix} a \\ 0 \end{vmatrix}$$

(1 − 16) Change the Cartesian integral into an equivalent polar integral. Then integrate the polar integral

1.
$$\int_{-1}^{1} \int_{0}^{\sqrt{1-x^2}} dy dx$$

2.
$$\int_{0}^{1} \int_{0}^{\sqrt{1-y^2}} \left(x^2 + y^2\right) dx dy$$

3.
$$\int_{-a}^{a} \int_{-\sqrt{a^2 - x^2}}^{\sqrt{a^2 - x^2}} dy dx$$

$$4. \qquad \int_0^6 \int_0^y x dx dy$$

5.
$$\int_{-1}^{0} \int_{-\sqrt{1-x^2}}^{0} \frac{2}{1+\sqrt{x^2+y^2}} dy dx$$

6.
$$\int_{0}^{\ln 2} \int_{0}^{\sqrt{(\ln 2)^2 - y^2}} e^{\sqrt{x^2 + y^2}} dxdy$$

7.
$$\int_{-1}^{1} \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} \ln(x^2 + y^2 + 1) dx dy$$

8.
$$\int_{1}^{2} \int_{0}^{\sqrt{2x-x^2}} \frac{1}{\left(x^2+y^2\right)^2} dy dx$$

9.
$$\int_{-1}^{1} \int_{-\sqrt{1-x^2}}^{\sqrt{1-x^2}} \frac{2dydx}{\left(1+x^2+y^2\right)^2}$$

10.
$$\int_{-1}^{1} \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} \ln(x^2 + y^2 + 1) dx dy$$

11.
$$\int_0^\infty \int_0^\infty \frac{1}{(1+x^2+y^2)^2} dx dy$$

12.
$$\int_0^3 \int_0^{\sqrt{9-x^2}} \sqrt{x^2 + y^2} \, dy dx$$

13.
$$\int_{-1}^{1} \int_{-\sqrt{1-x^2}}^{\sqrt{1-x^2}} \left(x^2 + y^2\right)^{3/2} dy dx$$

14.
$$\int_{-4}^{4} \int_{0}^{\sqrt{16-y^2}} \left(16-x^2-y^2\right) dxdy$$

15.
$$\int_{0}^{\frac{\pi}{4}} \int_{0}^{\sec \theta} r^{3} dr d\theta$$

$$16. \quad \int_0^{\frac{\pi}{2}} \int_1^{\infty} \frac{\cos \theta}{r^3} r \ dr d\theta$$

- 17. Find the area of the region cut from the first quadrant by the curve $r = 2(2 \sin 2\theta)^{1/2}$
- 18. Find the area of the region lies inside the cardioid $r = 1 + \cos \theta$ and outside the circle r = 1
- 19. Find the area enclosed by one leaf of the rose $r = 12\cos 3\theta$
- **20.** Find the area of the region common to the interiors of the cardioids $r = 1 + \cos\theta$ and $r = 1 \cos\theta$
- 21. Find the area of the region bounded by all leaves of the rose $r = 3\cos 2\theta$
- **22.** Find the area of the region inside both the circles r = 2 and $r = 4\cos\theta$

- 23. Find the area of the region that lies inside both the cardioids $r = 2 2\cos\theta$ and $r = 2 + 2\cos\theta$
- **24.** Find the area of the annular region $\{(r, \theta): 1 \le r \le 2, 0 \le \theta \le 2\pi\}$
- **25.** Find the area of the region bounded by the cardioid $r = 2(1 \sin \theta)$
- **26.** Find the area of the region bounded by all leaves of the rose $r = 2\cos 3\theta$
- 27. Find the area of the region inside both the cardioid $r = 1 \cos \theta$ and the circle r = 1
- 28. Find the area of the region inside both the cardioid $r = 1 + \sin \theta$ and the cardioid $r = 1 + \cos \theta$
- **29.** Find the area of the region bounded by the spiral $r = 2\theta$, for $0 \le \theta \le \pi$, and the x-axis.
- **30.** Find the area of the region inside the limaçon $r = 1 + \frac{1}{2}\cos\theta$
- 31. Find the area of the region bounded by $r = 2 \sin 2\theta$
- **32.** Find the area of the region bounded by $r^2 = 2 \sin 2\theta$
- 33. Find the area of the region outside the circle r=1 and inside the rose $r=2\sin 3\theta$ in QI
- **34.** Find the area of the region outside the circle $r = \frac{1}{2}$ and inside the circle $r = 1 + \cos \theta$
- 35. Integrate $f(x,y) = \frac{\ln(x^2 + y^2)}{\sqrt{x^2 + y^2}}$ over the region $1 \le x^2 + y^2 \le e$
- **36.** The region enclosed by the lemniscates $r^2 = 2\cos 2\theta$ is the base of a solid right cylinder whose top is bounded by the sphere $z = \sqrt{2 r^2}$. Find the cylinder's volume.
- 37. Evaluate $\iint_R (x+y) dA$; R is the disk bounded by circle $r = 4 \sin \theta$
- **38.** Find the volume of the solid bounded above by the paraboloid $z = 2 x^2 y^2$ and below by the plane z = 1
- **39.** Find the volume of the solid bounded above by the paraboloid $z = 8 x^2 3y^2$ and below by the hyperbolic paraboloid $z = x^2 y^2$
- (40-51) Evaluate the integral over R using polar coordinates

40.
$$\iint_{R} \left(x^2 + y^2 \right) dA; \quad R = \left\{ \left(r, \ \theta \right) : \ 0 \le r \le 4, \ 0 \le \theta \le 2\pi \right\}$$

41.
$$\iint_{R} 2xydA; \quad R = \left\{ \left(r, \ \theta \right) : \ 1 \le r \le 3, \quad 0 \le \theta \le \frac{\pi}{2} \right\}$$

42.
$$\iint_{R} 2xy \ dA; \quad R = \left\{ (x, y): \quad x^2 + y^2 \le 9, \quad y \ge 0 \right\}$$

43.
$$\iint_{R} \frac{dA}{1+x^2+y^2}; \quad R = \{(r, \theta): 1 \le r \le 2, 0 \le \theta \le \pi\}$$

44.
$$\iint_{R} \frac{dA}{\sqrt{16-x^2-y^2}}; \quad R = \left\{ (x, y): \quad x^2 + y^2 \le 4, \quad y \ge 0 \right\}$$

45.
$$\iint_{R} \frac{dA}{\sqrt{16-x^2-y^2}}; \quad R = \left\{ (x, y): \quad x^2 + y^2 \le 4, \quad x, y \ge 0 \right\}$$

46.
$$\iint_{R} e^{-x^2 - y^2} dA; \quad R = \left\{ (x, y): \quad x^2 + y^2 \le 9 \right\}$$

47.
$$\iint_{R} \sqrt{x^2 + y^2} \ dA; \quad R = \{(x, y): y \le x \le 1, 0 \le y \le 1\}$$

48.
$$\iint_{D} \sqrt{x^2 + y^2} \ dA; \quad R = \left\{ (x, y): \ 1 \le x^2 + y^2 \le 2 \right\}$$

49.
$$\iint_{R} \frac{dA}{\left(x^2 + y^2\right)^{5/2}}; \quad R = \left\{ \left(r, \ \theta\right) : \ 1 \le r \le \infty, \quad 0 \le \theta \le 2\pi \right\}$$

50.
$$\iint_{R} e^{-x^{2}-y^{2}} dA; \quad R = \left\{ (r, \theta): \quad 0 \le r \le \infty, \quad 0 \le \theta \le \frac{\pi}{2} \right\}$$

51.
$$\iint_{R} \frac{dA}{\left(1+x^2+y^2\right)^2}; \quad R \in QI$$

52. Which bowl holds more water if it is filled to a depth of four units?

a) The paraboloid
$$z = x^2 + y^2$$
, for $0 \le z \le 4$

b) The cone
$$z = \sqrt{x^2 + y^2}$$
, for $0 \le z \le 4$

c) The hyperboloid
$$z = \sqrt{1 + x^2 + y^2}$$
, for $1 \le z \le 5$

- d) To what weight (above the bottom of the bowl) must the cone and paraboloid bowls be filled to hold the same volume of water as the hyperboloid bowl filled to a depth of 4 units $(1 \le z \le 5)$
- **53.** Consider the surface $z = x^2 y^2$
 - a) Find the region in the xy-plane in polar coordinates for which $z \ge 0$.
 - b) Let $R = \left\{ (r, \theta) : 0 \le r \le a, -\frac{\pi}{4} \le \theta \le \frac{\pi}{4} \right\}$, which is a sector of a circle of radius a. Find the volume of the region below the hyperbolic paraboloid and above the region R.
- **54.** A cake is shaped like a hemisphere of radius 4 with its base on the *xy*-plane. A wedge of the cake is removed by making two slices from the center of the cake outward, perpendicular to the *xy*-plane and separated by an angle of φ .
 - a) Use a double integral to find the volume of the slice for $\varphi = \frac{\pi}{4}$.
 - b) Suppose the cake is sliced by a plane perpendicular to the xy-plane at x = a > 0. Let D be the smaller of the two pieces produced. For what value of a is the volume of D equal to the volume in part (a)?
- 55. Suppose the density of a thin plate represented by the region R is $\rho(r, \theta)$ (in units of mass per area). The mass of the plate is $\iint_R \rho(r, \theta) dA$. Find the mass of the thin half annulus $R = \{(r, \theta): 1 \le r \le 4, 0 \le \theta \le \pi\}$ with a density $\rho(r, \theta) = 4 + r \sin \theta$
- **56.** An important integral in statistics associated with the normal distribution is $I = \int_{-\infty}^{\infty} e^{-x^2} dx$. It is evaluated in the following steps.
 - a) Assume that $I = \left(\int_{-\infty}^{\infty} e^{-x^2} dx\right) \left(\int_{-\infty}^{\infty} e^{-y^2} dy\right) = \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} e^{-x^2 y^2} dx dy$

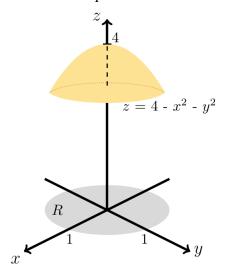

Where we have chosen the variables of integration to be x and y and then written the product as an iterated integral. Evaluate this integral in polar coordinates and show that $I = \sqrt{\pi}$. Why is the solution $I = -\sqrt{\pi}$ rejected?

b) Evaluate $\int_0^\infty e^{-x^2} dx$, $\int_0^\infty x e^{-x^2} dx$, and $\int_0^\infty x^2 e^{-x^2} dx$.

- 57. For what values of p does the integral $\iint_{R} \frac{k}{\left(x^2 + y^2\right)^p} dA$ exist in the following cases?
 - a) $R = \{(r, \theta): 1 \le r \le \infty, 0 \le \theta \le 2\pi\}$
 - b) $R = \{(r, \theta): 0 \le r \le 1, 0 \le \theta \le 2\pi\}$
- **58.** Consider the integral $\iint_{R} \frac{k}{\left(1+x^2+y^2\right)^2} dA \text{ where } R = \left\{ (x, y): 0 \le x \le 1, 0 \le y \le a \right\}$
 - a) Evaluate I for a = 1.
 - b) Evaluate I for arbitrary a > 0.
 - c) Let $a \to \infty$ in part (b) to find I over the infinite strip $R = \{(x, y): 0 \le x \le 1, 0 \le y \le \infty\}$
- **59.** In polar coordinates an equation of an ellipse with eccentricity 0 < e < 1 and semimajor axis a is

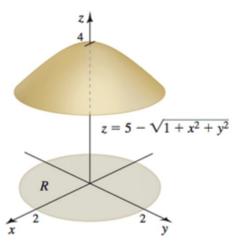

$$r = \frac{a\left(1 - e^2\right)}{1 + e\cos\theta}$$

- a) Write the integral that gives the area of the ellipse.
- b) Show that the area of an ellipse is πab , where $b^2 = a^2 \left(1 e^2\right)$
- (60-63) Find the volume of the solid below the paraboloid $z=4-x^2-y^2$ and above

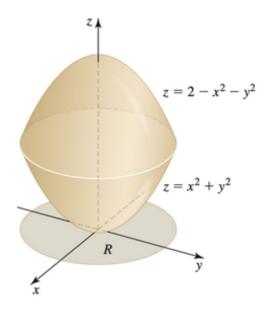

- **60.** $R = \{(r, \theta): 0 \le r \le 1, 0 \le \theta \le 2\pi\}$
- **61.** $R = \{(r, \theta): 0 \le r \le 2, 0 \le \theta \le 2\pi\}$
- **62.** $R = \{(r, \theta): 1 \le r \le 2, 0 \le \theta \le 2\pi\}$
- **63.** $R = \left\{ (r, \theta): 1 \le r \le 2, -\frac{\pi}{2} \le \theta \le \frac{\pi}{2} \right\}$

(64 – 67) Find the volume of the solid below the hyperboloid $z = 5 - \sqrt{1 + x^2 + y^2}$ and above

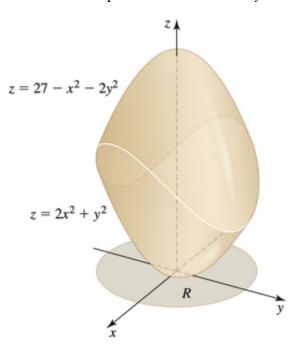

- **64.** $R = \{(r, \theta): 0 \le r \le 2, 0 \le \theta \le 2\pi\}$
- **65.** $R = \{ (r, \theta) : 0 \le r \le 1, 0 \le \theta \le \pi \}$
- **66.** $R = \{(r, \theta): \sqrt{3} \le r \le 2\sqrt{2}, 0 \le \theta \le 2\pi\}$
- **67.** $R = \left\{ (r, \theta): \sqrt{3} \le r \le \sqrt{15}, -\frac{\pi}{2} \le \theta \le \pi \right\}$

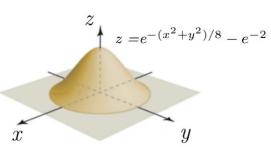

68. Find the volume of the solid between the paraboloids $z = x^2 + y^2$ and $z = 2 - x^2 - y^2$

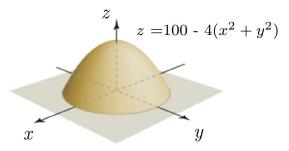

69. Find the volume of the solid between the paraboloids $z = 2x^2 + y^2$ and $z = 27 - x^2 - 2y^2$

70. Find the volume of island $z = e^{-(x^2 + y^2)/8} - e^{-2}$

71. Find the volume of island $z = 100 - 4(x^2 + y^2)$

72. Find the volume of island $z = 25 - \sqrt{x^2 + y^2}$
